

Smoke Outlook for 10/14 - 10/15

Fresno CA - KNP Complex

Issued at: 2021-10-14 06:57 PDT

Fire

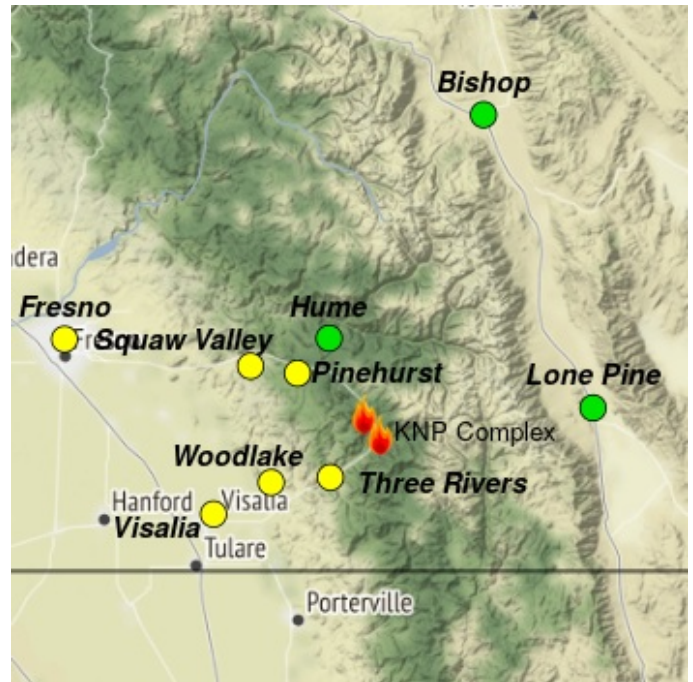

With the continued dry conditions expect to see more active burning of interior fuels. Little to no forward fire progression is expected on the fire today and tonight. Interior pockets of heavier fuels will continue to actively burn along with surface fuels under tight canopies. For more information see inciweb.nwcg.gov.

Smoke

Yesterday continued to see Good to Moderate air quality in the forecast area. A carbon copy of yesterday's weather is forecasted today. High pressure continues to build over the fire area and region this week which will bring in a warming trend and lighter winds. Terrain driven winds will be dominant which will bring any smoke produced down drainages overnight. Inversion conditions will prevail with smoke trapped in lower drainages until the inversion breaks in the late morning. Light easterly transport winds are predicted which may carry any smoke produced to the west. Smoke impacts will be heavily dependent on fire activity.

Health and Safety

Air quality may change unexpectedly. If you begin to notice health effects from smoke, you are encouraged to follow the "actions to protect yourself" listed below.

Daily AQI Forecast* for Oct 14, 2021

Station	Yesterday	Wed 10/13	Forecast* Comment for Today -- Thu, Oct 14	Thu 10/14	Fri 10/15
	hourly 6a noon 6p
