

Smoke Outlook

North Central OR/WA Camp Creek

9/08 - 9/09

Issued by [Wildland Fire Air Quality Response Program](#) on September 08, 2023 at 07:42 AM PDT

Fire

The Camp Creek fire is reported at 1,940 acres with 17% containment. Yesterday we had more cloud cover than expected which resulted in low fire activity. With more sun and warmer temperatures, expect an increase in fire activity today and tomorrow.

Smoke

Smoke conditions today and tomorrow will be similar to the past few days, but smoke concentrations tomorrow will be higher if fire activity increases. Light west winds continue to be in the extended weather forecast, which will bring light smoke eastward towards Mount Hood, Hood River, and the Dalles during the day and possibly settling at night. At night, smoke will move down-slope towards East Portland and clear out mid to late morning. Today through tomorrow night, any smoke that does impact communities will be light and impacts will be minimal, with the exception of the communities near the mouth of the Sandy River, such as Troutdale, Gresham, and Camas, which may reach Unhealthy levels in the mornings.
