

Smoke Outlook

North-Central New Mexico Indios Fire

6/04 - 6/05

Issued by Wildland Fire Air Quality Response Program on June 04, 2024 at 08:18 AM MDT

Fire

The Indios Fire is at 11,500 acres and 66% completion. Burning in the Chama River Canyon Wilderness, the fire has closed portions of the Continental Divide Trail (CDT) in the Santa Fe National Forest. Activity on the Indios Fire has decreased. Today, increased humidity and clouds, as well as gustier westerly winds are anticipated. Fire behavior will be limited to smoldering, flanking, and backing as interior pockets of green vegetation are consumed. Crews are focused on mopping up, suppression repair, and reinforcing control lines. Wednesday and Thursday will see warming temperatures before increased showers and storms later in the week. The fire is expected to remain within the current footprint.

Smoke

GOOD air quality conditions have prevailed. Air quality impacts will remain limited to light overnight smoke in canyons near the fire perimeter. Communities along Abiquiu Lake (HWY 96, HWY 84, and RT-151) will see light smoke and haze during the day. With the chance of precipitation increasing and no significant fire growth anticipated, air quality conditions will remain GOOD with brief periods into MODERATE for the extended forecast period.

Daily AQI Forecast* for Tuesday

	Yesterday	Mon	Forecast*	Tue	Wed
Station	hourly	6/03	Comment for Today Tue, Jun 04	6/04	6/05
	6a noon 6p			-
