Leader’s Intent: The Boise Fire is being managed with a full suppression strategy.

Operational Update:

Last night was quiet on the fireline and night shift resources were able to continue mopping up and improving lines protecting the structures in Orleans, Pearch Creek, along the Red Cap Road, at Le Perron Flat, and Short Ranch. They are falling snags along the edge and removing vegetation close to the lines to ensure that containment is secure. Today, two divisions have been added to the fire on its east side, and those resources will begin working to reopen lines from the Orleans Mountain Road and working their way onto High Point Ridge via the Nordheimer Trail

to determine viable options for containment. While there are few opportunities for containment in those areas, the objective is to keep the fire footprint as small as possible, and crews will take advantage of today's favorable conditions to continue their good work.

Weather and Fire Behavior: The weather today is expected to be similar to yesterday, with cool temperatures and increased humidity. Light winds are predicted for the afternoon, especially in east/west aligned drainages and on exposed ridges.
