Leader’s Intent: The Boise Fire is being managed with a full suppression strategy.

Operational Update: Containment continues to be accomplished on the east side of the fire with crews patrolling and moping up the fires edge. The entire fire area is constantly being monitored for potential threats to the line. Snagging operations are continuing on interior road systems, providing safe passage for crews. The western edge of the fire remains in the mop up phase along with chipping and suppression repair operations. Helicopters are being utilized for cargo missions and are available for initial attack. Resource and cultural advisors continue to influence and direct suppression repair tactics when needed.

Weather and Fire Behavior: Expect sunny skies with hot and dry conditions over the fire area today. Winds will be relatively light out of the W/NW at 5-9 mph. Relative humidities will be in the 17 to 21% range. No significant fire growth will be expected. As vegetation continues to dry with the current weather pattern, smoke may be visible from unburnt fuels in the fires interior.
