Leader’s Intent: The Boise Fire is being managed with a full suppression strategy.

Operational Update: The active flank on the Eastern edge of the fire continues to be staffed with crews engaged in suppression efforts. In addition to direct line construction, there is also a strong suppression repair presence in the areas further East from the fires edge near the Forks of Salmon. With the use of resource and cultural assets along with crews and dozers, the plan is to reestablish a natural resemblance of the area. The Western flank is being maintained through mop up and monitoring efforts, with continued suppression repair. Snagging operations continue to improve safe passage for crews traveling in and out of the fire area. Firefighter safety remains to be the top priority considering the steep terrain. Aircraft continues to be available as needed for water dropping missions.

Weather and Fire Behavior: The weather prediction for Tuesday will return to warmer and drier conditions with highs in the mid to upper 80’s and minimum RH’s in the mid to low 20’s. Winds will remain relatively calm at 5-8 with gusts of 12. This weather pattern has the potential to increase fire activity, but no significant spread is anticipated.
