**September 6, 2024 10:00 a.m.**

**Incident Commander:** Jamie Tyson

**Location:** 16 miles northwest of Philipsburg, MT

**Start Date:** 8/26/2024

**Cause:** Undetermined

**Size:** 145 acres

**Resources on Site:** 1 crew; 2 engines; 1 helicopter; miscellaneous heavy equipment

**Total Personnel:** 31

The McDermott Fire, located in the Upper Willow Creek area, is burning in an inaccessible area containing a large concentration of standing dead trees ("snags") that pose challenges to ensuring firefighter safety and in responding to potential medical emergencies.

Fire managers from the Forest, working in collaboration with local county officials and cooperating agency representatives, have identified and prioritized critical values at risk in the fire area. The closest values are located three miles to the east of the fire's location.

Helicopters dropped water on the fire during the initial attack phase, but high winds and the inaccessibility of the fire location resulted in fire growth. Additionally, drift smoke from other large fires to the west and south resulted in the inability to fly additional helicopters for air operations in subsequent days.

### **CURRENT STATUS/PLANNED ACTIONS:**

Helicopters will continue to support ground crews with water bucket drops on the east flank to cool hot spots and prevent fire progression. The crew will continue to construct handline on the fire, east of the Black Pine Trail.

### **WEATHER AND FIRE BEHAVIOR:**

Gusty outflow winds associated with passing thunderstorms materialized over the fire area days ago, with little to no measurable precipitation. Temperatures are expected to continue in the mid to upper 80s for at least the next week.

Fire behavior initially was active, with spotting and group torching and a moderate rate of spread. The fire showed little to no movement and was burning internal pockets of timber in the McDermott Ridge area. Small plumes of smoke from group torching of trees on the northern flank near McDermott Gulch were visible today.

### **CLOSURES AND RESTRICTIONS:**

The Forest is in Stage 1 Fire Restrictions. Campfires are allowed only in a permanent metal fire grate/ring provided by the Forest Service in a designated, developed recreation site. Smoking is restricted to vehicles, in buildings, or in an area clear of flammable materials. Devices with an on/off switch that use LPG fuels are allowed in an area clear of flammable materials within 3 feet of the device.

Forest fire managers are working on trail closures. They encourage the public to please avoid the fire area as to not interfere with fire fighting operations.
